SafeCash Retail Deposit Secure

Note deposit solution for improved cash management and same-day credit

SafeCash Retail Deposit Secure is designed to make life easier for retailers. Bundles of up to 50 notes can be deposited into the machine at once and the totals are automatically recorded and accounted for. This relieves employees of cash-counting responsibilities and other back office administration.

At the same time, SafeCash Retail Deposit Secure helps improve cash management. The retailer benefits from same-day credit and by monitoring real-time cash levels, the CIT partner can be alerted when pick-up is due. Since the notes are deposited into a Grade III equivalent safe in highcapacity bag, collection is quick, simple and secure.

Through touch-screen identifi cation, user details are also logged for complete transaction transparency and since the cash amounts can always be monitored, this eliminates any cash-counting discrepancies.

SafeCash Retail Deposit Secure makes up part of Gunnebo's complete range of cash deposit, collection and recycling solutions for retailers.

SafeCash Retail Deposit Secure

Note deposit solution for improved cash management and same-day credit

Configuration

All front-end interaction with the SafeCash Retail Deposit Secure is carried out via a touch screen. This means employees do not need to carry around another card or key, but simply enter their identification code on the screen before making their deposits.

For speed, bundles of up to 50 notes can be fed into the machine at once. The notes are instantly counted and the total displayed on the screen, before a receipt for the amount deposited is printed.

For convenient CIT pick-up, the notes are sent straight into a bag which, uniquely for a deposit safe of this kind, is housed in a safe with protection equivalent to ECB•S Grade III.

Cash management and monitoring

The real-time cash level of each safe can be continuously tracked using Gunnebo's web-based monitoring software. This can either be hosted by Gunnebo or by the retailer, who may choose to run the programme locally or centrally.

Access to the system may be granted to CIT partners to help optimise route planning and pick-up times. Gunnebo service may also be connected to monitor the technical status of a series of machines so that maintenance and updates can be carried out before a problem occurs.

Same-day credit

As soon as notes are deposited, details of the amounts can be sent to the bank allowing the retailer's account to be credited that working day. (Note: This can only be done with the cooperation of a bank).

Quality and environmental management systems

The SafeCash Retail Deposit Secure is manufactured in accordance with ISO 9001 for Quality Management Systems and ISO 14001 for Environmental Management Systems.

BENEFITS AT A GLANCE

- Improved cash management
- Less back-office administration
- Real-time monitoring of cash levels – better CIT service
- Same-day credit (optional)
- Complete transaction transparency – no cash discrepancies

STEP BY STEP

1. User enters ID code via the touch screen

2. Notes are fed into the safe (up to 50 at once)

3. Notes are counted and the deposit total is displayed on the screen

4. User is given a receipt for the cash deposit

5. Notes are deposited into a high capacity bag with self-closing lid which can be quickly and easily collected by CIT

TECHNICAL DATA

Orientation	Freestanding frontload
Safe	CEN III, Optional CEN L
Lock	Wide variety of locks possible, standard mechanical keylock
Deposit capacity notes	Bundle up to 50, multiple deposit possible
Deposit speed	2,5 sec/note
Bag capacity	Up to 4000 notes (parameters to program, either volume or value)
User interface	15" Touch screen
User identification	ID via touch or Magnetic card (optional)
Dimensions	560x500x1480mm (WxDxH incl. PC.)
Weight	430 kg empty, Full 500 kg
Powersupply	230V, 50 Hz
Power consumption	65W (Idle state), 85W (Normal operation)
Operating condition	T 5–45°C, H 20–80%
